

REACT TO INTRUSIONS WHEN IT MATTERS  
WITH REAL-TIME ALERTS FROM i3

## ALERT CENTER

A simple and user-friendly software that allows you to keep track and monitor thousands of locations at once and respond to alerts in real-time.

Alert center is gentle on your bandwidth, compared to other video monitoring software because only alert related footage is transmitted.

### How does it work?

1

Once an alert is triggered, it gets recorded by SRX-Pro which automatically sends an alert to the CMS Server.

2

The server collects the alerts and immediately send them to the remote viewing software Video Pilot Client (VPC), a mobile device and the alert center for review by the user.

3

Instantly, the user can review footage and determine the best course of action. Alerts can then be discarded or saved with notes.

4

Alert Centre is ideal with Video Pilot Matrix, i3's Enterprise system that can monitor hundreds of cameras simultaneously.
