Re: OS hard drive position changed on all Compact Wallmount DVMS models

To all of our customers and partners;

Please note that effective immediately the Operating System (OS) hard drive for all Compact Wallmount DVMS models (UL6010, UL6016, PL12010, PL12016, and 24020C) will be installed inside the chassis, close to the front grill of the unit (see Figure 1).

All standard units will be shipped with one (1) 80GB OS drive and one (1) 750 GB storage drive. The OS drive will be labeled accordingly for ease of identification.

The additional storage drive can be installed by the dealer/integrator in the front removable hard drive bay (see Figure 2), which will be left empty on all standard Compact Wallmount units.

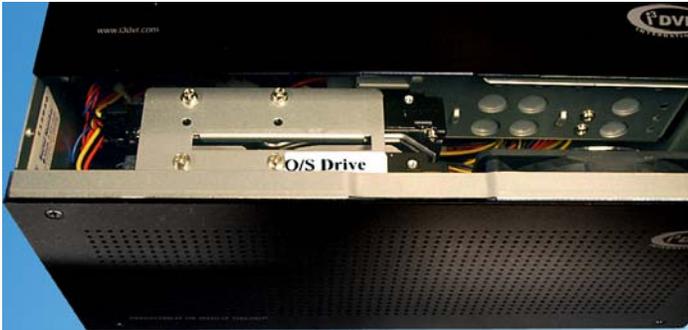

Figure 1. OS drive is labeled inside the chassis.

Figure 2. Front hard drive bay is left empty for the dealer/integrator to install an additional Seagate SATA Surveillance drive.

For more information on how to install an additional drive into the front bay as well as for instructions on how to properly partition the new storage hard drive, please refer to the **Technical Bulletin# 080410-HW-02**.

Please contact technical support at support@i3dvr.com or by phone: 1.877.877.7241 if you have any other questions or issues.

Thank you very much for your attention and cooperation.

Best regards,

Bob Hoang
