Re: SPK Key for SRX-Pro Lite and Ultra Lite models

To all of our customers and partners;

When purchasing SRX-Pro Lite or Ultra Lite DVR unit please note that the installation mode of our SPK (Software Protection Key) has been changed. Effective immediately, the SPK will be plugged into the internal USB connector of the DVR rather than to the outside USB connector in the back of the system.

Consequently, **all** i³DVR SRX-Pro DVR systems will arrive with the SPK device already plugged in inside the unit.

Important: This change does not impact any DVR units currently in the field.

Thank you for your attention.

Best regards,

Bob Hoang
