## Re: New Compact Wall Mount i3-400

To all of our customers and partners;

i<sup>3</sup> is introducing a new compact wall mount chassis to better meet the advancements in technology. The i3-400 chassis comes with new hardware features that are cost effective to the end-consumers. The new i3-400 will be in full production as of January 2011 for SRX-Pro Lite, SRX-Pro 24024C, and IPP04C, IPP10C, IPP16C, and IPP24C.

The i3-400 chassis new design is made for convenience. The chassis comes with a SATA hard drive box can hold up to three hard drives. This allows the technician to easily change the hard drives without needing any tools. Field technicians need to shut down the system, open up the front door lock and simply push one of the three hard drives release buttons from the SATA hard drive box to replace or add a new hard drive. The SATA hard drive box also comes with a fan that will help to cool down the SATA hard drives. The default OS hard drive is always at the top of the

three hard drives. The OS drive can easily be replaced if needed by a certified field technician; use the provided backup DVD image for full restoration. Space is limited on the i3-400 chassis and thus a slim DVD/CD writer was selected for production.

The best is to come when it comes to part replacement. The i3-400 chassis' hardware comes with modules such as the SATA hard drive box for both iP-Pro and SRX-Pro, 16 independent video input and output board, one 75  $\Omega$  independent dipswitch for the 16 loop out cameras, and 8 control output and input sensors only for SRX-Pro. A 300 Watt power supply that comes with the i3-400 chassis provides more than enough power requirement of less than 200 Watts. The i3-400 chassis' provides two side air flow fans to cool the system. Furthermore, both the i3-400 and the rack mount chassis are utilizing the same Intel motherboard DH55HC.
