Re: XPe HDD Limitation

To all of our customers and partners;

When adding hard drives to your XPe OS DVR/NVR system, please remember that the XPe operating system cannot address disk space beyond the 2 Terabyte limit. While it is possible to install a 3TB storage drive on your XPe DVR/NVR system, only a portion of that drive will be recognized by the OS and available for video storage. To maximize your return on investment, i3 International recommends using 1TB or 2TB hard disk drives for video storage for XPe DVR/NVR systems.

i3-approved hard drives:

- WD1003FBYX (Western Digital 1TB RE4)
- WD2003FYYS (Western Digital 2TB RE4)
- I-ST31000525SV (Seagate 1TB Surveillance)
- I-ST31000526SV (Seagate 1TB Surveillance)

Thank you very much for your attention and cooperation.

i3 International Inc.
