Re: iS316 Enterprise-Grade Storage Solution

To all of our customers and partners

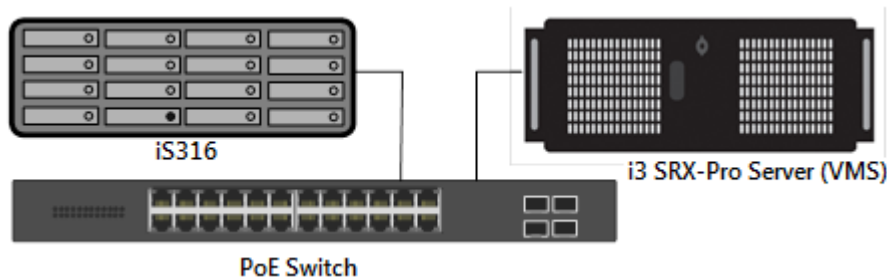

Introducing the new iS316, an affordable IP-based iSCSI SAN. It provides storage for video surveillance and data backup. Working in combination with i3's SRX-Pro Server (VMS) and the Annexus IP cameras, iS316 provides recorded video instantly and improves the network connectivity, remote access, ease of distribution, storage flexibility, and integration with the Central management system.

The iS316 disk array provides great stacking scalability supporting up to 12 units with a combined maximum of 192 hard drives and its enterprise-grade performance enables the system to handle the surveillance workload with ease. A dedicated CPU allows the iS316 to process the packets at an efficient rate thus avoiding data loss.

The iS316 disk array provides comprehensive enterprise-grade data protection features. Built into each iS316 model are multiple RAID level options, writable snapshot function, volume cloning, online disk roaming, and instant volume restoration to protect all stored data. On the hardware level, the redundant power supplies (2x) and fan modules provide reliable efficient power and manageability to the system.

iS316 Network configuration.
