**Re: Hardware change notice. Release of U2 NVR****To all of our customers and partners;**

i3 International is excited to announce the release of our new NVR the U2. The U2 rack mount is made for durability. Its long cycle industrial motherboard can handle multiple IP cameras and long data retention. It comes with 3 bays of hard drives; each bay can maximize to 6TB making it an 18TB system.

The U2 includes two serial ports that allow the U2 to integrate to Point of Sale easily without a 3<sup>rd</sup> party USB-serial converter device. The two network interface cards (NIC) enable the U2 to connect to a local switch such as i3's S243 or S81 for multiple IP cameras and the other NIC can connect to the internet without impeding your network.

This NVR provides an on-board audio input and output. For video backup use the slim DVD recorder or the 4x USB 3.0 ports or the 4x USB 2.0 ports (2 on the back panel and 2 on the front panel) for easy to use memory stick storage.

U2 is designed to run i3's SRX-Pro software; it is designed as a more compact chassis and a replacement of the 4i series server. If more hard drives or longer retention of recording capacity is required the U2 can also fully integrate with i3's external hard drive devices.
