September 9, 2008

Re: Windows XP Embedded OS 3.0 Release.

To all of our customers and partners;

With this bulletin we would like to advise you of the End of Life for the **Microsoft Windows XP Professional OEM licenses** as of January 2009. To counter the EOL for this OS version, all i³DVR International DVMS lines will be moving towards the XP Embedded (XPe) v3.0 operating system.

XP Embedded operating system provides a full Windows Application Programming Interface (API), and support for the full range of applications and device drivers written for Microsoft Windows. You may already be familiar with XP Embedded operating system since all of i3 SRX-Pro Ultra Lite and SRX-Pro Lite products currently come with the earlier version of XPe v2.1.

To guarantee the smooth transition and to ensure continuous stability of i³DVR products, i³DVR International will move towards XPe v3.0 operating system in two phases.

As a part of **Phase A** launch, all Wallmount chassis DVMS models (SRX-Pro Ultra Lite, SRX-Pro Lite, and SRX-Pro Hybrid 24020C) will come pre-installed with XPe v3.0 OS starting **September 15th, 2008**.

As a part of **Phase B** launch, all Rackmount chassis DVMS and all NVR models will come pre-installed with XPe v3.0 OS. Please stay tuned for the Phase B launch date, which will be announced in the following technical bulletin releases.

Rest assured that from the i³ DVMS and NVR products operation standpoint no visible difference exists between XP Professional and XPe v3.0 operating systems. Unlike XPe v2.1, no administrative password is required on XPe v3.0 in order to gain access to OS administrative tools. In addition, XPe v3.0 will boast faster boot-up time and full printer support.

Thank you very much for your attention and cooperation.
Please contact our technical support line 1.877.877.7241 for further details.

Best regards,

Bob Hoang
