Re: SRX-Pro v.3.3.3.36 Patch Release Notice

To all of our customers and partners;

This bulletin is the official notice of the SRX-Pro v.3.3.3.36 Patch release.

The patch installation package can be downloaded from the i3 website: <http://i3international.com/index.php/software-downloads> and will also be installed on all units built in the factory from January 25th, 2016 onward.

Note that Special Build routings will remain unchanged and will follow previously approved specifications. In order to move the Special Built routing to the newest SRX-Pro software release, the integrator/end user must indicate so in writing.

This patch does not affect backward compatibility, all customers that were using earlier release of SRX-Pro Server v.3.3.3, will not have to update their SRX-Pro Remote and Video Pilot Client (VPC) software

Improvements:

1. Improve system CPU usage.
2. Support DirectX display on SRX-Pro Server units with AD2016 capture card and ATI graphic (video) card that have been upgraded from Windows XPe to Windows 7e. Additional steps are required. If you have previously upgraded or are planning to upgrade your NVR/HVR's operating system from XPe to 7e, please give our technical support team a call for instructions on how to enable the new DirectX display functionality.
3. AVI backup stability improvement.

Please consult with your Regional Sale Managers for more information.
Thank you very much for your attention and cooperation.

Please contact technical support if you have any questions or issues.
