Re: Video Pilot Matrix Server/Console v2.0.2.9019 Release Notice

To all of our customers and partners;

This bulletin is the official notice of the Video Pilot Matrix Server and Console **v2.0.2.9019** release.

Video Pilot Matrix Server/Console is a security software that is ideal for viewing large number of cameras on multiple monitors forming a video wall. Video Pilot Matrix (VPM) is a robust, unlimited video viewing tool that utilizes a "Google-like" searching capability.

Video Pilot Matrix Server utilizes i3 GiPi, Generic IP Interface, to communicate with all supported IP cameras on a local area network. Video Pilot Matrix Server automatically searches, discovers IP cameras on LAN and displays thumbnail pictures on the Video Pilot Matrix Console. Operators can categorize, group, color-code and display the IP cameras on any of the connected video monitors.

VPMS can find and store up to 1000 IP video stream connections, and each VPMC can display up to 180 live IP video streams at-a-time on up to six monitors. Up to 120 IP streams can be continuously recorded on the Video Pilot Matrix Server. Recorded video can then be searched and played back on VPMC, 20 cameras at-a-time.

New VPMS/VPMC releases can be downloaded from i3's Downloads website:
<https://i3international.com/support/download>

Fixed Issues:

- DirectX Windows 7e issue presenting on DFI motherboard fixed.

New Features:

Recording (VPMS)

- Record primary and/or sub stream video on VPMS, up to 120 streams
- Create continuous recording weekly/daily schedule
- Simultaneous multi-drive recording
- Automatic first-in-first-out video recycling
- Continuous recording mode

Streaming/Search/Playback (VPMC)

- View up to 180 live IP streams at 30 fps
- Search up to 20 recorded IP streams at-a-time at 30 fps
- Free zoom timeline
- Video thumbnail preview on the timeline
- Automatic switching between primary/sub streams when live channel is maximized/minimized for best performance and server resources management
- Playback history
