**Re: SRX-Pro Service/Remote v6.0.2.60 Release Notice**

To all of our customers and partners;

This bulletin is the official notice of the upcoming SRX-Pro Service, Console and Remote **v6.0.2.60** release scheduled for **June 1, 2018**.

Once released, the software installation package will be available for download from the i3 website: <http://i3international.com/software-downloads> and will be installed on all NVR units built in the factory from June 1, 2018 onward.

**Reminder:** SRX-Pro Server v.6.0 onwards is available in 64-bit version only. Because no 32-bit version package is available, legacy ADIO1616 I/O board (control card) will not be supported. Use WDT/WDT-22 I/O boards or UIO8 device instead.

**v6.0.2.60 Improvements include:**

1. SRX-Pro will continually monitor the system for any changes to the video recording partitions, including iSCSI. If any changes to recording partitions are detected, e.g. new partition or dropped partition detected, SRX-Pro will restart (NVR will not be rebooted). Examples: dropped partition detected, new partition detected.
2. Improvements to the corrupted index file recovery tool.
3. Annexus 62V added to the list of cameras supported by SRX-Pro for Edge motion detection recording.
4. Built-in GiPi library and adapter updates.
5. First launch Time Zone warning message added to SRX-Pro Service installation (via Service Monitor)
6. Ax63Z zoom out/focus issue resolved
7. Ax78R dewarp/PTZ panel control issue resolved
8. Improper storage data recycling after major version upgrade issue resolved
9. CMS heatmap snapshot in continuous recording mode issue resolved
