Re: Video Pilot Matrix Server/Console v2.1.2.9373 Release Notice

To all of our customers and partners;

This bulletin is the official notice of the Video Pilot Matrix Server and Console **v2.1.2.9373** release.

Video Pilot Matrix Server/Console is a security software that is ideal for viewing large number of cameras on multiple monitors forming a video wall. Video Pilot Matrix (VPM) is a robust, unlimited video viewing tool that utilizes a "Google-like" searching capability.

Video Pilot Matrix Server utilizes i3 GiPi, Generic IP Interface, to communicate with all supported IP cameras on a local area network. Video Pilot Matrix Server automatically searches, discovers IP cameras on LAN and displays thumbnail pictures on the Video Pilot Matrix Console. Operators can categorize, group, color-code and display the IP cameras on any of the connected video monitors.

VPMS can find and store up to 1000 IP video stream connections, and each VPMC can display up to 180 live IP video streams at-a-time on up to six monitors. Up to 120 IP streams can be continuously recorded on the Video Pilot Matrix Server. Recorded video can then be searched and played back on VPMC, 20 cameras at-a-time.

New VPMS/VPMC releases can be downloaded from i3's Downloads website:
<https://i3international.com/support/download>

New Features and Improvements:

- GiPi Adapter update
- VPMC, all monitors power off and then on, repeatedly - crash issue resolved.
- VPMC/VPMS, potential crash with HTTP resolved.
- VPMS, show live streams only in web Status page.
- VPMC, monitor layout fix in detecting top/bottom which made some mouse operation for console open/close behave abnormally.
- Improvement to web admin report error message: "login error by # of client limit" and underlying library is enabled to handle IPv6 "localhost".

With any pricing questions, kindly contact our Customer Care department at 1.866.840.0004.
