Re: SRX-Pro Service/Remote v6.0.2.68 Release Notice

To all of our customers and partners;

This bulletin is the official notice of the SRX-Pro Service, Console and Remote **v6.0.2.68** release.

The software installation package is now available for download from the i3 website: <http://i3international.com/software-downloads> and will be installed on all NVR units built in the factory from October 2, 2018 onward.

Reminder: SRX-Pro Server v.6.0 onwards is available in 64-bit version only. Because no 32-bit version package is available, legacy ADIO1616 I/O board (control card) will not be supported. Use WDT/WDT-22 I/O boards or UIO8 device instead.

v6.0.2.68 Improvements include:

Service/Console Improvements:

1. If GUEST user has no live video permissions, SRX-Pro Console will show the Login screen. Once the login credentials are entered, SRX-Pro Console will be displayed, and the correct user permissions will be applied. (In the background, the program will re-connect to the SRX-Pro service with the new credentials automatically)
2. View context menus disabled for LOGOUT and GUEST users. Disabled menu features: Reset Digital Zoom Presets, Reset Text overlays, Reset Video Privacy, Reset Stream Selections, Reset Video Analytics, Hide All Channels Info selection.
3. All live channels will be automatically shown in the SRX-Pro Console Live mode, including any newly added channels (subject to user permissions). The user no longer has to drag & drop the channels into the display grid.
4. Improved internal watchdog function for SRX-Pro Service. Service will be automatically restarted after 3 minutes of service stopping.

Other Improvements:

1. SRX-Pro Server/Service will no longer automatically recognize USB flash drives and external USB storage devices as video recording partitions.
2. In Hardware setup, channel thumbnails are now sorted as follows:
 - Assigned inputs are shown in the front of the list, sorted by Channel ID (CXX)
 - Unassigned inputs are shown in the end of the list, sorted by IP Address
3. Newest GiPi adapter included in the release package (Newest adapters: 3xLogic.gpa, Foscam.gpa).
4. Inverted direction of PTZ camera controls fixed when using "IP Video with Audio" GiPi method.
5. Storage setup page GUI improvements.

Ax63Z improvements:

- Zoom value and PTZ speed dependency introduced.
Important: To use this new feature, enable the “**Proportional P/T**” function on camera web GUI in the Pan/Tilt Control tab. By default, this feature is disabled on camera FW 01_07-29.
 - o When scene is fully zoomed out, the joystick control speed will remain steady even in heavy usage conditions.
 - o When the scene is zoomed in, camera joystick speed will be slower. The higher the zoom value, the slower the joystick speed.
 - o The zoom value will affect the PTZ speed the same way when using the on-screen PTZ controls. The higher the zoom value, the slower the camera moves. Use the speed bar to increase/decrease overall camera speed.

- Spinning issue resolved.
