**Re: Video Pilot Matrix Server/Console v2.1.2.9599 Release Notice**

To all of our customers and partners;

This bulletin is the official notice of the Video Pilot Matrix Server and Console **v2.1.2.9599** release.

Video Pilot Matrix Server/Console is a security software that is ideal for viewing large number of cameras on multiple monitors forming a video wall. Video Pilot Matrix (VPM) is a robust, unlimited video viewing tool that utilizes a "Google-like" searching capability.

Video Pilot Matrix Server utilizes i3 GiPi, Generic IP Interface, to communicate with all supported IP cameras on a local area network. Video Pilot Matrix Server automatically searches, discovers IP cameras on LAN and displays thumbnail pictures on the Video Pilot Matrix Console. Operators can categorize, group, color-code and display the IP cameras on any of the connected video monitors.

VPMS can find and store up to 1000 IP video stream connections, and each VPMC can display up to 180 live IP video streams at-a-time on up to six monitors. Up to 120 IP streams can be continuously recorded on the Video Pilot Matrix Server. Recorded video can then be searched and played back on VPMC, 20 cameras at-a-time.

New VPMS/VPMC releases can be downloaded from i3's Downloads website:

**New Features and Improvements:**

- VPMS, keep GiPi camera connection information to speed up the connection for slow AXIS Fisheye cameras.
- VPMC, fix wrong monitor assignment icon caused by maximized division
- VPMS/VPMC, auto-update fixes and improvements
- VPMS/VPMC, no thumbnail generation for disabled channels
- "localhost" failure issue fixed
- Hostname failure issue fixed
- GiPi fix: HTTP streaming with non-default port
- GiPi adapter updated to 20181005 version
