

Launch VPC

To launch VPC, double-click VPC icon on the Desktop.

Log into your i3Host account

i3Host serves as the single access point for all i3 products.

Click the **CONTROL** tab to open the Servers Connection Panel. Hover over the **Add Server** tile, then click **i3Host** to open the login form.

Note: Skip this step if already connected to i3Host.

If the i3Host login form is displayed, enter your i3Host Email and Password, then click **SAVE AND DOWNLOAD DATA**.

Note: To ensure secure access, i3Host supports multiple login methods, including email OTP, phone SMS, and authentication apps such as Google Authenticator or Microsoft Authenticator.

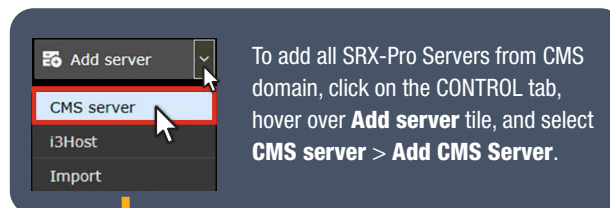

After logging into i3Host, the user can download all companies they have permission to access.

For each company, click **Download** **Download** to retrieve its NVR list, then connect to the NVRs to view camera video.

If the user has permission to access only one company, the NVR list will be downloaded automatically, allowing access to camera video.

Add CMS domain Servers

i3 CMS subscribers can import all SRX-Pro NVRs connecting to their domain in one step.

To add all SRX-Pro Servers from CMS domain, click on the **CONTROL** tab, hover over **Add server** tile, and select **CMS server** > **Add CMS Server**.

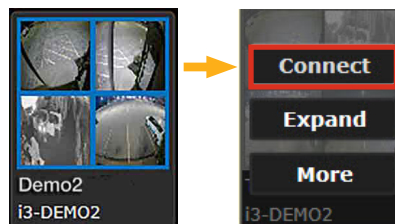

Fill out the CMS Server connection information, then click **SAVE AND DOWNLOAD DATA**.

Click **Download** to import all SRX-Pro connections from CMS Server.

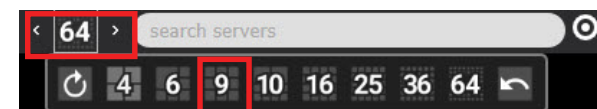

View Live video

In **CONTROL** tab, hover over the added Server tile and click **Connect**.

To change screen division click this icon next to the Search bar and select the number of cameras to view on screen.

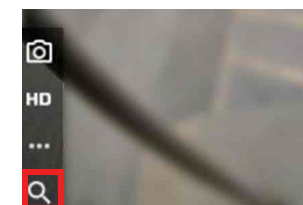

Quick Menu

To view camera's quick menu panel, hover your mouse over the camera image.

	Snapshot	save the current frame as *.jpg
	Video quality	enhance video resolution
	Interactive view	select your preferred viewing angle for fisheye cameras
	Preset & tour	set and cycle through preset viewing angles for fisheye cameras
	History faces	a list of recognized faces
	PTZ	PTZ speed control (advanced)
	Linked cameras	map must already be configured
	POS/OSD	toggle the OSD, VA, POS, Video Privacy... text overlay on/off
	Quick Search	fast video lookup by time or event

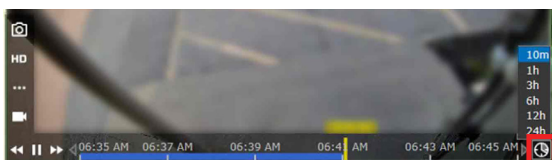

Quick Search (current day)

To enable Quick Search, hover the mouse over the camera image and click on the magnifying glass .

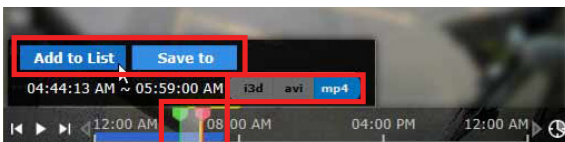

Note: Quick Search is limited to the current 24-hour day.

Scroll UP or DOWN to zoom in and out of the timeline or click on the Interval icon and select preferred option - from 10 minutes to 24 hours.

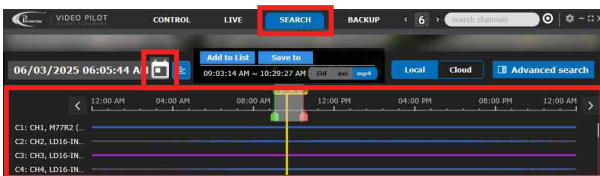

To create a backup in Quick Search:

1. Drag the green (start) and red (end) triangles to mark the start/ end backup clip.
2. Select backup format: **i3d**, **avi** or **mp4**.
3. Click on **Add to List** or **Save to**. If using *Add to list* option, see Backup section to learn how to complete the backup in the Backup List.

Search (Calendar)

To search video recorded on a different date, click **SEARCH**, then click the Calendar icon . Click on your preferred date. Dates in **RED** have video that can be viewed. Dates in **GREY** have no video.

To zoom in and out of the timeline or to create a backup for displayed channels, use instructions from the Quick Search.

Backup

To create a video backup from scratch or complete backups created in Quick Search or Search tab, click **BACKUP**

To complete previously created sessions, click

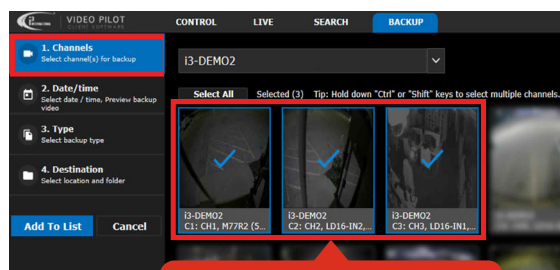

Start Start, wait until **Ready** changes to **Finished**

To modify sessions, click Stop, Edit, Delete

To create a new Backup from scratch, click **Add a Backup**

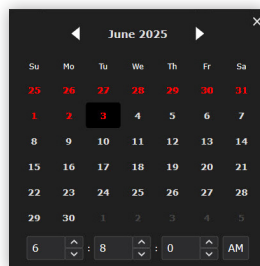

Add a Backup

1. Click **1. Channels**. Set one or more channels.

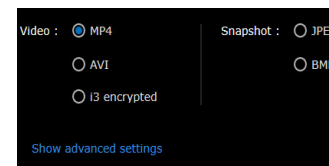

Tip: Hold down "Ctrl" or "Shift" keys to select multiple channels.

2. Click **2. Date/time**. Set the From and To date and time for the backup clip. Click inside the date/time field or click on the Calendar icon

In the calendar, select your preferred date and enter the Time, to a second. Repeat for both Start and End date/time.

3. Click **3. Type** and select the video format: MP4, AVI or i3 encrypted (tamper-proof format).

Optional: Click Show advanced settings to edit embedded text (MP4/AVI only) or select Main/Sub stream for backup.

4. Click **4. Destination** and choose where the video will be saved: Local Storage, Local One Drive, or Server Storage (Server Local, Server One Drive). If saving to Local Storage, the default folder is D:\i3backup. Select the backup destination

5. Click **Add To List** **Add To List**, then click **Start** to finish the backup.

Search Cloud

Cloud mode supports data backup retrieval from cloud services and allows search on only one channel at a time.

In the SEARCH tab, select one channel (multi-screen or full screen mode), choose mode Cloud , and click on Search button on the channel.

(OPTIONAL) Advanced Search

For faster and more precise searches, use advanced search options, such as Interval, Object, Event Recording Search, Face Optimization, Heatmap, AiSearch.

In the SEARCH tab, select one channel (multi-screen or full screen mode) and click on **Advanced search**, then select advanced search option.
